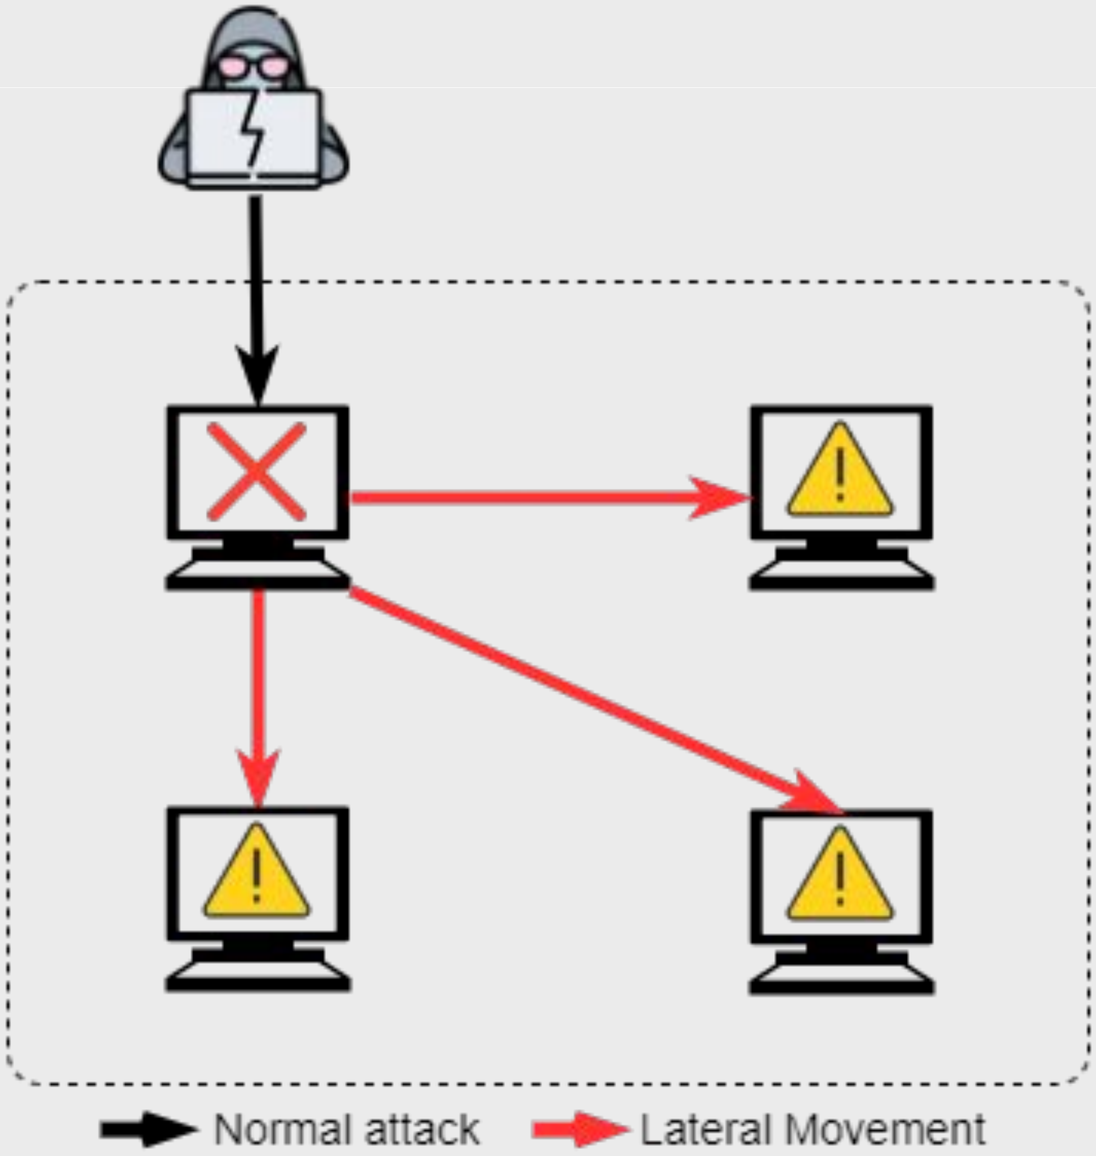
# Prediction System of Lateral Movement from Sysmon based on ATT&CK

for Blackhat Asia 2023

# Preliminary

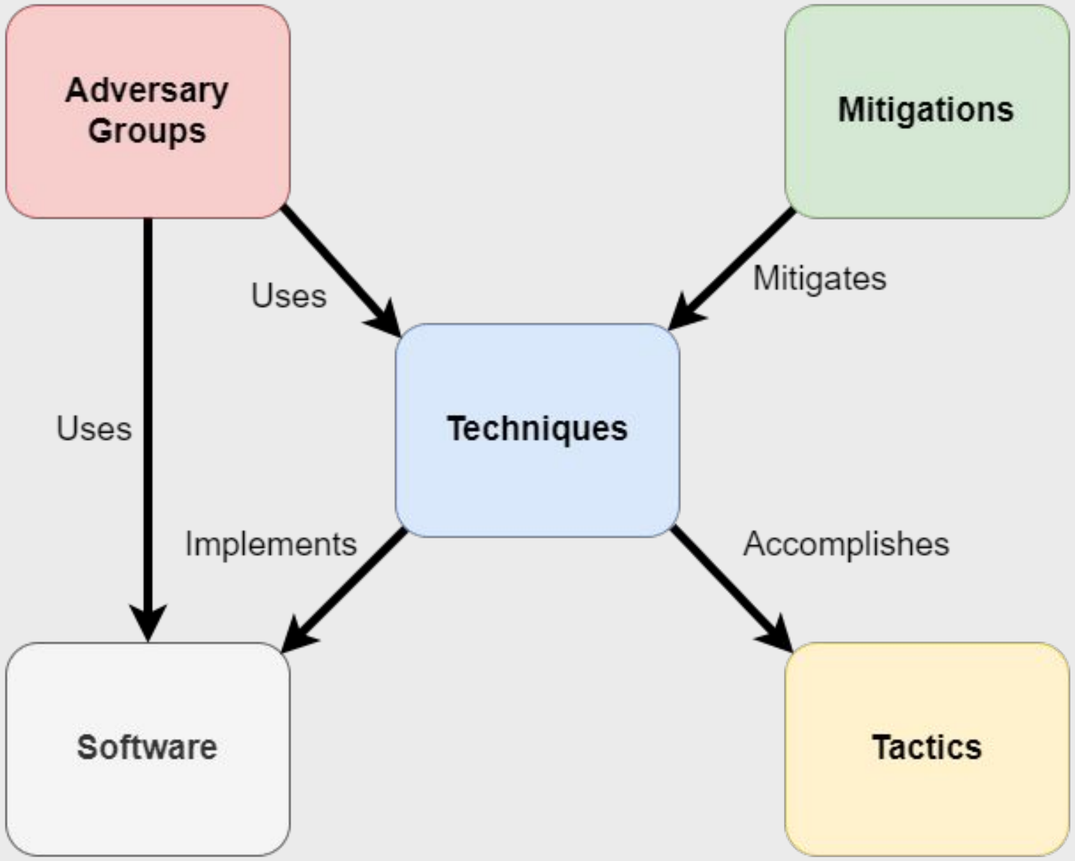
# Lateral Movement

- One of the attacks of the infection expansion phase of the cyberattack.
- After hacking into the system, the attacker tries to break into other devices of the same network.
- Attackers get credential information by expanding the infection.



# MITRE ATT&CK

- A knowledge base of cyber attack tactics and techniques based on past cyberattacks.
  - **Adversary Groups**: Groups of attackers
  - **Tactics**: Objective of attack
  - **Techniques**: Technique used in attacks
  - **Software**: Tools used in attacks
  - **Mitigations**: Mitigations for Attacks



# Atomic Red Team

- An open-source library of test based on MITER ATT&CK.
- You can use it to simulate adversarial activity in their environments.

## MITRE ATT&CK Technique

Adversaries may transfer tools or other files from an external system into a compromised environment. Tools or files may be copied from an external adversary-controlled system to the victim network through the command and control channel or through alternate protocols such as ftp. Once ...

Embodiment

## Atomic Red Team

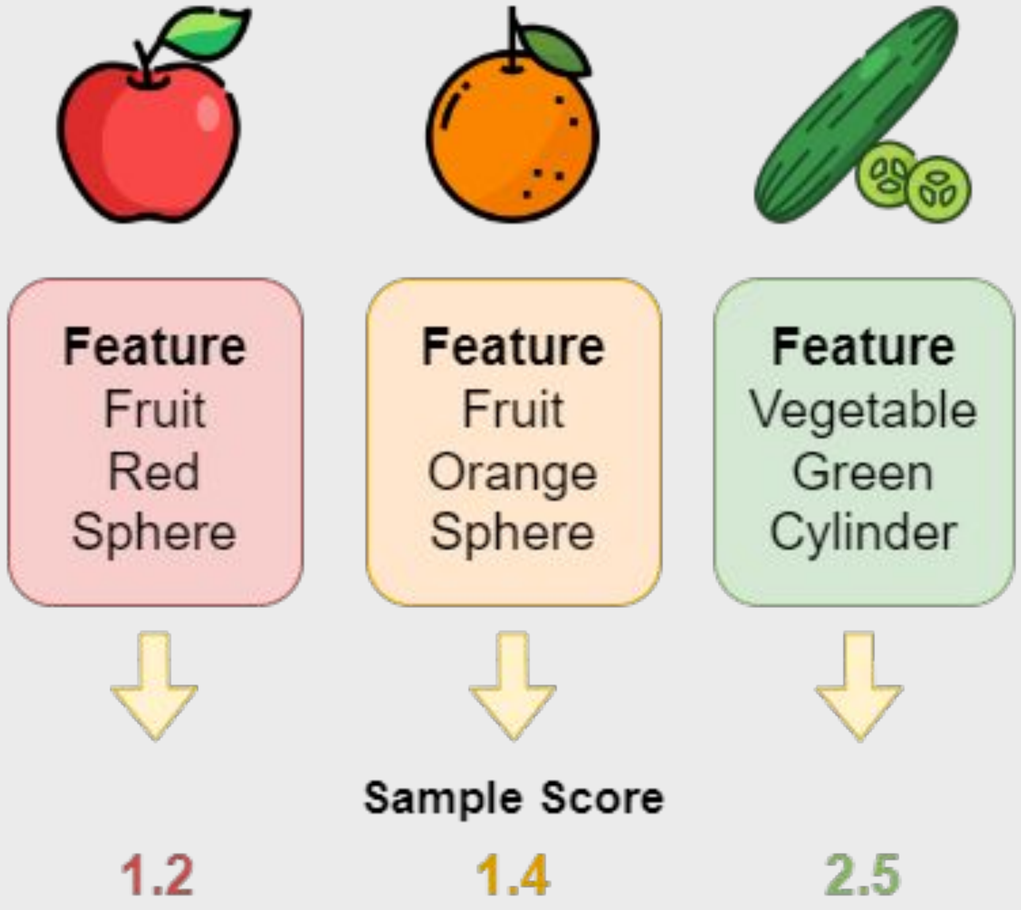
```
$ rsync -r #{local_path} #{username}@#{remote_host}:#{remote_path}

$ scp #{local_file} #{username}@#{remote_host}:#{remote_path}

$ sftp #{username}@#{remote_host}:#{remote_path} <<< $'put #{local_file}'
```

# The Quantification Theory Type 3

- One of the multivariate analysis.
- Sample score are obtained by calculating what elements are in each sample.
- The quantification theory type 3 analyzes the similarity based on the the proximity of sample score.



# Sysmon

- Tool for recording Windows system activity.
- We can investigate the cause and behavior of the system.

# About Our Tool

# Functions

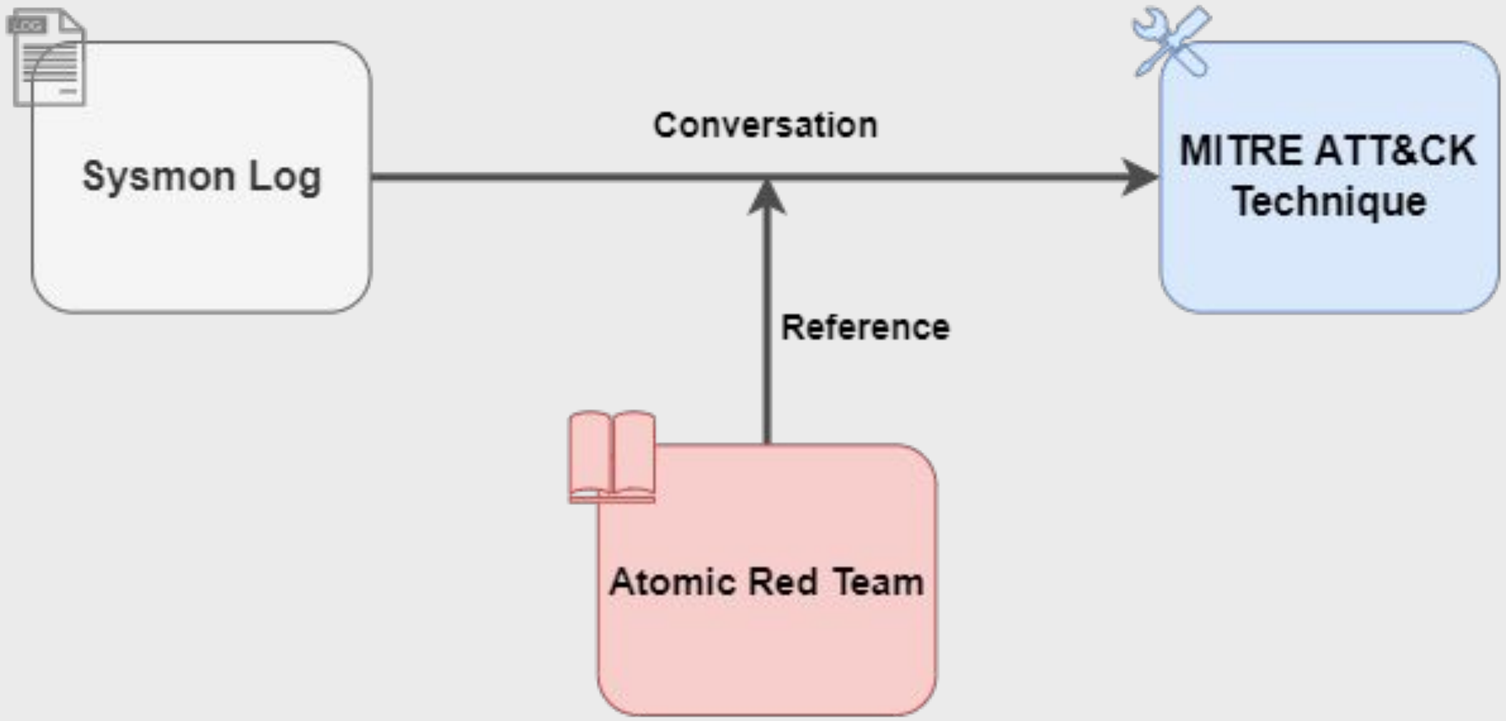
**Conversion of Sysmon logs**

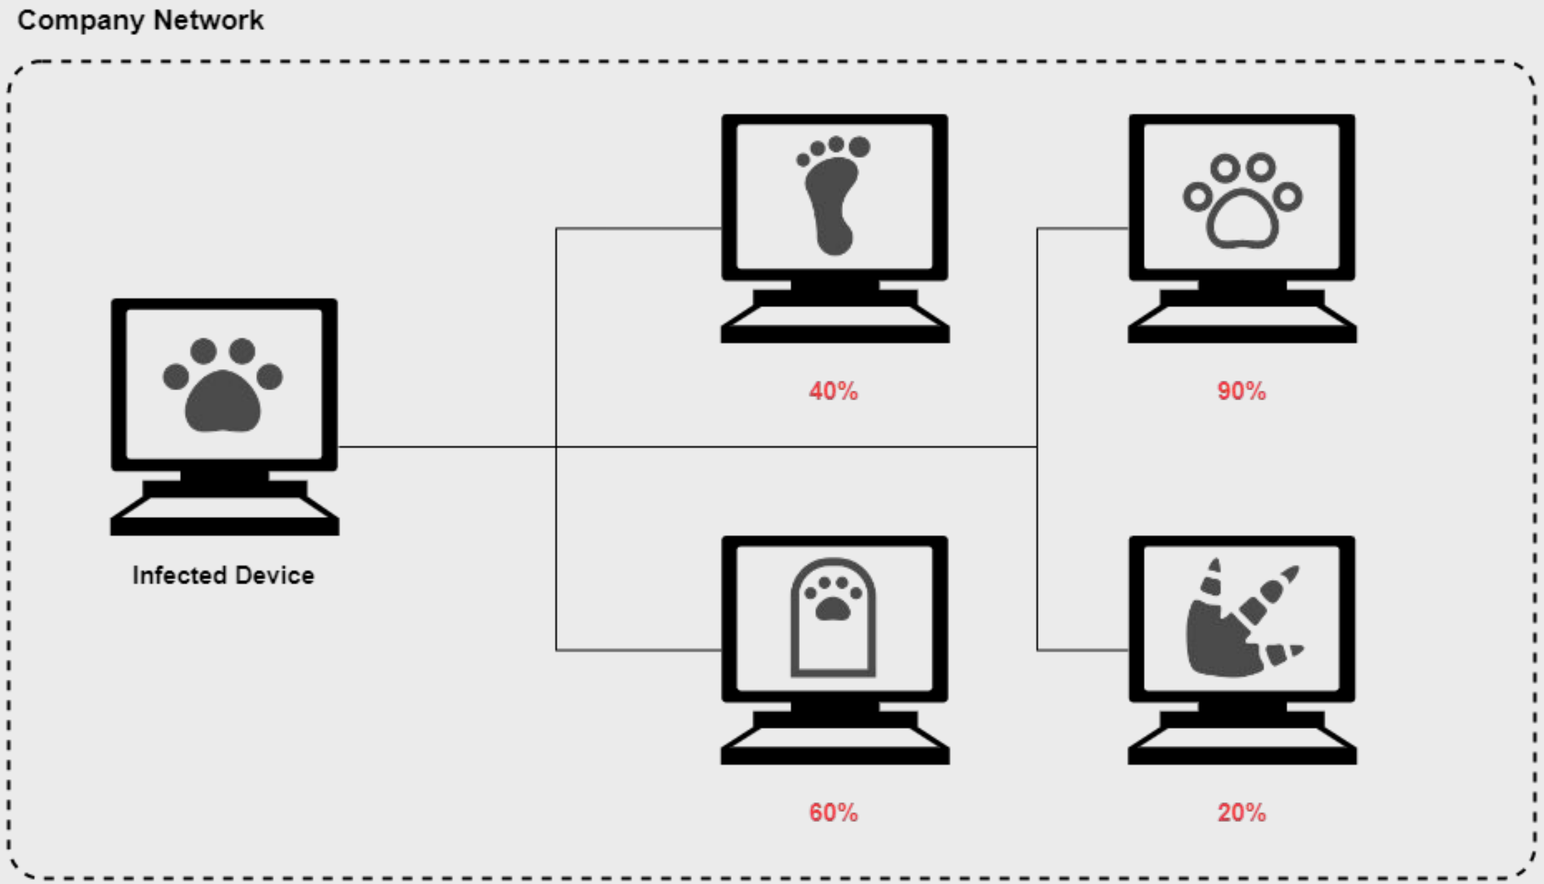
**&**

**Prediction of Lateral Movement Potencial**

# Conversion of Sysmon logs

- This tool converts Sysmon logs to ATT&CK Techniques.
  - Reference to Atomic Red Team.
- The attacks are displayed as a list or colored ATT&CK Matrix.



# Prediction of Lateral Movement Potencial


- This tool can find the device in Lateral Movement from the infected device's log similarity to others.
